LANGUAGES AND TECHNOLOGIES

- **Proficient:** Tailwind CSS, JavaScript, Ruby on Rails, React.js, Git, API Integrations
- **Exposure:** Shopify, NetSuite, PostgreSQL, MySQL, AWS EC2/Elastic Beanstalk, AWS S3, Stripe API, React Native

PROFESSIONAL EXPERIENCE

Booth and Partners | **Client: Peak Design** | Full stack Engineer | Makati City   June 2023 – Present

- Worked as a **Ruby on Rails Engineer** in an **Agile development environment**, collaborating with Product, Finance, and Ops teams to deliver high-impact backend services.
- Designed and maintained robust **API integrations** between Shopify and NetSuite to automate order processing, refund handling, and inventory synchronization.
- Migrated manual workflows from Celigo to custom Ruby on Rails services, cutting operational overhead.
- Lead root-cause analysis and resolution of complex API bugs and data mismatches, improving integration reliability across distributed systems.
- Created custom features in Shopify and NetSuite using Rails services, REST APIs, Restlets, and saved searches.
- Developed internal tools with secure, test-driven code (RSpec), including a factory-facing Rails app for generating serial numbers and producing PDF sticker assets for packaging lines.
- Architected and deployed microservice-style **Rails applications on AWS** (Elastic Beanstalk, S3, Redis), with clear service boundaries and scalable job processing via **Sidekiq**.

Proudcloud | Software Engineer | Quezon City   March 2022 – June 2023

- Developed and maintained web application (Challonge) using Ruby on Rails and React, creating features that improved user experience and increased performance.
- Identified bottlenecks and bugs, and devised solutions to these problems.
- Participated in daily scrum, sprint planning and other agile development practice.
- Interfaced with clients, estimated about 80% hands-on development and 20% client interaction & documentation.
- Maintained and updated existing codebase by refactoring code, fixing bugs, and updating dependencies.

PROJECT WORK

Teachbook | Developer | Code URL   2022

A Ruby on Rails learning management application for teachers and students to submit academic requirements.

- Built a feature where teachers can create an exam with grading points and students can answer the exam.
- Developed an extra layer of user authorization using Pundit to restrict the viewing of grades to select users.
- Set up ActionMailer to send confirmation emails to users and require them to authenticate.

EDUCATION

Full Stack Web Development, Avion School   2022
BS Computer Engineering, Mapúa University   2021
